

# Excel VBA インターフェースを使う

[http://www.ncfreak.com/magazine/No.003/vb\\_class.html](http://www.ncfreak.com/magazine/No.003/vb_class.html)

Base.cls

```
Option Explicit  
Public Function getName() As String  
    getName = "base class"  
End Function
```

Deliv.cls

```
Option Explicit  
Implements Base  
Private Function Base_getName() As String  
    Base_getName = "derived class"  
End Function
```

呼出

```
Dim b As Base  
Set b = New Deliv  
Debug.Print b.getName
```

結果

derived class

---
