

java.text.Collator を使用する

日本語文字列配列 jpWords をソートする単純な例

```
Collator collator = Collator.getInstance();
String tmpWord = null;
for (int i=0; i<jpWords.length; i++) {
    for (int j=i+1; j<jpWords.length; j++) {
        if ( collator.compare(jpWords[i], jpWords[j]) > 0 ) {
            tmpWord    = jpWords[i];
            jpWords[i] = jpWords[j];
            jpWords[j] = tmpWord;
        }
    }
}
```
