

Java HTTP リクエスト確認

[Java][コード片]

```
import java.io.InputStream;
import java.net.InetAddress;
import java.net.ServerSocket;
import java.net.Socket;

public class ServerSocketSample {

    public static void main(String[] args) {
        try {
            ServerSocketSample me = new ServerSocketSample();
            me.start();
        } catch (Exception e) {
            e.printStackTrace();
        }
    }

    public void start() throws Exception {
        InetAddress addr = InetAddress.getByName("localhost");
        ServerSocket server = new ServerSocket(8080, 0, addr);

        Socket sock = null;
        while (true) {
            sock = server.accept();
            InputStream in = sock.getInputStream();

            int c = 0;
            while( (c = in.read()) > 0) {
                System.out.print((char)c);
            }
        }
    }
}
```
