

# Jython JFileChooser 1

[[Jython](#)] [[Swing](#)] [[Jython](#)] [[Python](#)]

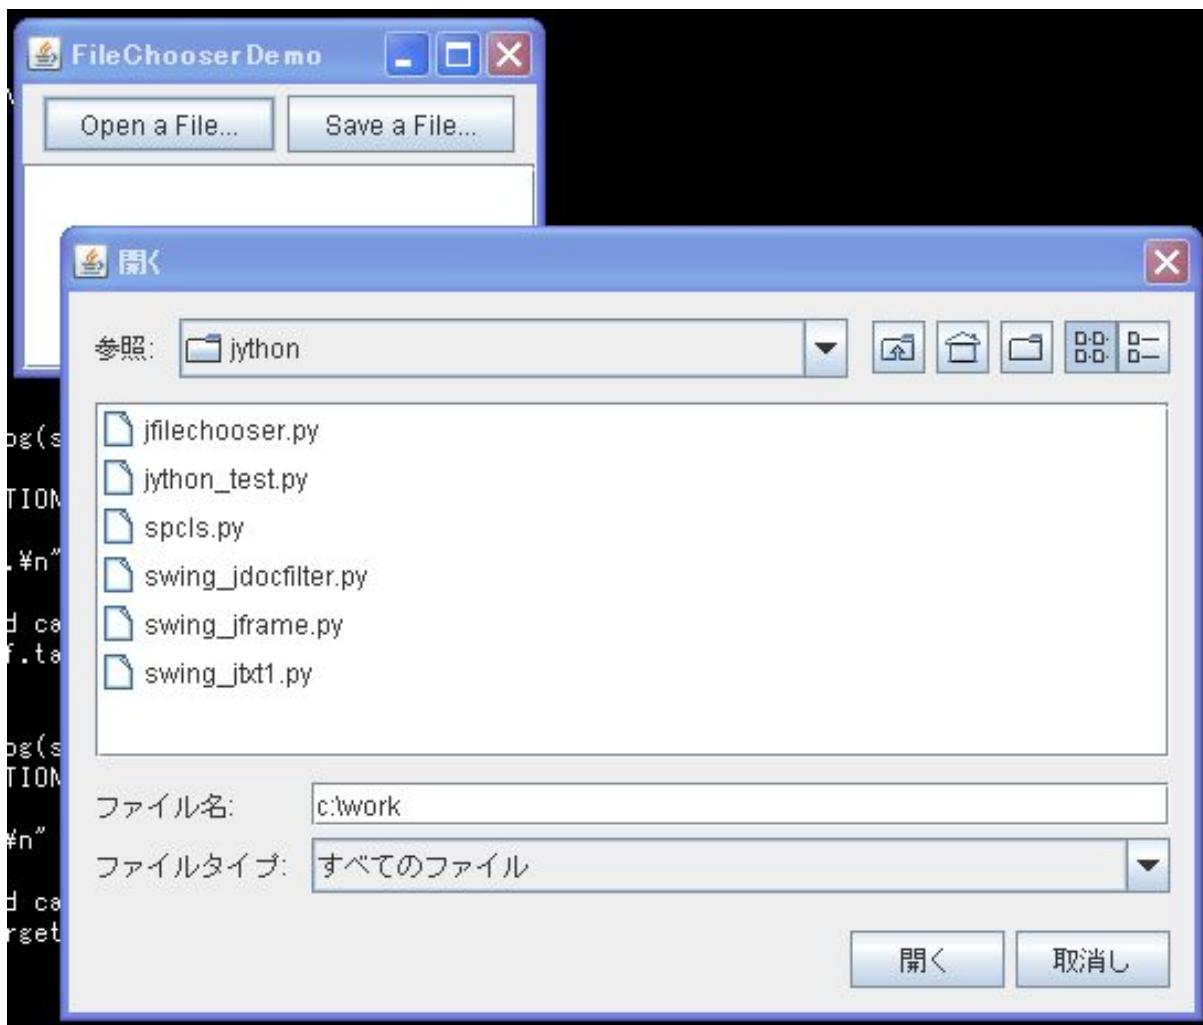

## 方針

以下を参考に、[Jython](#) でファイル選択を実装してみる

- <http://java.sun.com/docs/books/tutorial/uiswing/components/filechooser.html>

## ソースコード

### 実行例

## ソースコード

```
# -*- coding: utf-8 -*-

from java.lang import *
from java.io import *
from java.awt import *
from java.awt.event import *
from javax.swing import *
from javax.swing.filechooser import *

class JFileChooserTest(JPanel):
    def __init__(self):
        super(JFileChooserTest, self).__init__(BorderLayout())

        self.log = JTextArea(5, 20)
        self.log.margin = Insets(5,5,5,5)
        self.log.setEditable = False
        logScrollPane = JScrollPane(self.log)

        self.fc = JFileChooser()

        self.openButton = JButton("Open a File...")
        self.saveButton = JButton("Save a File...")

        lsnr = ButtonListener(self)
        self.openButton.addActionListener(lsnr)
        self.saveButton.addActionListener(lsnr)

        buttonPanel = JPanel()
        buttonPanel.add(self.openButton)
        buttonPanel.add(self.saveButton)

        self.add(buttonPanel, BorderLayout.PAGE_START)
        self.add(logScrollPane, BorderLayout.CENTER)

    def createUI(self):
        frame = JFrame("FileChooserDemo")
        frame.defaultCloseOperation = JFrame.EXIT_ON_CLOSE
        frame.add(self)
        frame.pack()
        frame.visible = True

class ButtonListener(ActionListener):
    def __init__(self, target):
        self.target = target

    def actionPerformed(self, e):
